

25 May 2026
ERP/2026/002

25TH MEETING OF THE EURO RETAIL PAYMENTS BOARD (ERP) – TECHNICAL COMPOSITION
18 June 2026 from 10:00 to 12:30

Teleconference

AGENDA

1	Introductory remarks by the Chair; adoption of the agenda
2	Instant retail payments in euro The ERP will provide a status update on the use of the SCT Inst and verification-of-payee (VoP) schemes. The ERP will further update on the related SEPA Request-to-Pay (SRTP) scheme, in view of the rollout of SCT Inst on a pan-European basis that was previously cited by communities as a reason for not considering SRTP as necessarily useful. Participants are invited to take note of the updates, share experiences from the perspective of the associations they represent and to discuss possible actions at the ERP level. <i>Presented by: ERP</i> <i>Document:</i> ERP status update on payment and payment-related schemes
3	Business-to-business (B2B) payments Business-to-business (B2B) payments sit at the centre of economic activity, and yet they have often been treated as a secondary concern in payments discussions. The Eurosystem, when developing the comprehensive payment strategy specifically included B2B as a distinct category of the strategy, in order to elevate its prominence and spur follow up action. The ERP Secretariat prepared a proposal to follow-up on the areas of action raised in the Eurosystem’s comprehensive payments strategy. Participants are invited to

	discuss the proposed approach in view of further endorsement by ERPB members in written procedure. <i>Presented by: Secretariat</i> <i>Document:</i> Proposed new ERPB workstream - enhancing innovative (instant) payment solutions to facilitate B2B payments
4	Fraud prevention The ERPB has worked on fraud prevention for retail payments and endorsed a set of recommended actions in September 2024. Taking into account developments since then, notably on the PSR proposal, participants are invited to consider possible additional actions in the remit of the ERPB. <i>Presented by: Consumer representatives</i> <i>Document:</i> Proposal for additional action on fraud prevention in the context of the ERPB
5	One-Leg Out Instant Credit Transfer (OCT Inst) Going beyond 'domestic' payments in SEPA, the EPC's OCT Inst scheme is an important contribution paving the way for more efficient cross-border payments, leveraging the efficiencies achieved for SEPA payments. Yet, more efforts are required to achieve wide adoption to enable reachability which is key to reap the benefits of the scheme. Based on an update by the EPC, participants are invited to discuss possible impediments to a broader take-up of the scheme and possible actions at the level of the ERPB. <i>Presented by: EPC</i> <i>Document:</i> EPC status update on payment and payment-related schemes

Topics to be dealt with in written procedure:

Status of past ERPB recommendations
