### Loans or credit lines to enterprises

#### Question 1

Over the past three months, how have your bank's credit standards<sup>1</sup> as applied to the approval of loans or credit lines to enterprises<sup>2, 3, 4</sup> changed? Please note that we are asking about the change in credit standards, rather than about their level.

(in percentages, unless otherwise stated)

4) See Glossary for Enterprises.

5) See Glossary for Enterprise size.

6) See Glossary for Maturity.

7) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage is defined as the difference between the sum of the percentages for "tightened considerably" and "tightened somewhat", and the sum of the percentages for "eased somewhat" and "eased considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

3) Involves the sale of loans from the bank's balance sheet, i.e. off-balance sheet funding.

4) See Glossary for Non-banks.

5) See Glossary for Perception of risk and risk tolerance.

6) Risks related to non-performing loans may be reflected not only in the "industry or firm-specific situation and outlook/borrower's creditworthiness", but also in the bank's "cost of funds and balance sheet constraints".

7) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage (NetP) is defined as the difference between the sum of banks responding "--" (contributed considerably to tightening) and "-" (contributed somewhat to tightening), and the sum of banks responding "+" (contributed somewhat to easing) and "++" (contributed considerably to easing). "°" means "contributed to basically unchanged credit standards". The diffusion index (DI) is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options.

1) The factors refer to the same sub-factors as in question 2.

2) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage (NetP) is defined as the difference between the sum of banks responding "--" (contributed considerably to tightening) and "-" (contributed somewhat to tightening), and the sum of banks responding "+" (contributed somewhat to easing) and "++" (contributed considerably to easing). "°" means "contributed to keeping credit terms and conditions basically unchanged". The diffusion index (DI) is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options.

### Question 5

Over the past three months (apart from normal seasonal fluctuations), has the share of enterprise loan applications<sup>1</sup> that were completely rejected<sup>2</sup> by your bank increased, remained unchanged or decreased (loan volume, relative to the total volume of loan applications in that loan category)?

(in percentages, unless otherwise stated)

	Share of rejected applications	
	Oct 21	Jan 22
Decreased considerably	0	0
Decreased somewhat	1	1
Remained basically unchanged	95	98

1) See Glossary for Loan application.

2) See Glossary for Loan rejection.

3) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage is defined as the difference between the sum of banks responding "increased considerably" and "increased somewhat", and the sum of banks responding "decreased somewhat" and "decreased considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

## Question 6

Over the past three months (apart from normal seasonal fluctuations), how has the demand for loans<sup>1</sup> or credit lines<sup>2</sup> to enterprises changed at your bank? Please refer to the financing need of enterprises independent of whether this need will result in a loan or not.

1) See Glossary for Demand for loans.

2) See Glossary for Credit line.

3) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage is defined as the difference between the sum of banks responding "increased considerably" and "increased somewhat", and the sum of banks responding "decreased somewhat" and "decreased considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

### Question 7

1) See Glossary for Debt refinancing/restructuring and renegotiation.

2) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage (NetP) is defined as the difference between the sum of banks responding "++" (contributed considerably to higher demand) and "+" (contributed somewhat to higher demand), and the sum of banks responding "-" (contributed somewhat to lower demand) and "--" (contributed considerably to lower demand). "°" means "contributed to keeping demand basically unchanged". The diffusion index (DI) is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options.

### Question 8

Please indicate how you expect your bank's credit standards as applied to the approval of loans or credit lines to enterprises to change over the next three months. Please note that we are asking about the change in credit standards, rather than about their level.

(in percentages, unless otherwise stated)

	Overall		Loans to small and medium-sized enterprises		Loans to large enterprises		Short-term loans		Long-term loans

<sup>1</sup>) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage is defined as the difference between the sum of the percentages for "tighten considerably" and "tighten somewhat", and the sum of the percentages for "ease somewhat" and "ease considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

### Question 9

Please indicate how you expect demand for loans or credit lines to enterprises to change at your bank over the next three months (apart from normal seasonal fluctuations)? Please refer to the financing need of enterprises independent of whether this need will result in a loan or not.

<sup>1</sup>) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage is defined as the difference between the sum of the percentages for "increase considerably" and "increase somewhat", and the sum of the percentages for "decrease somewhat" and "decrease considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

## Loans to households

### Question 10

Over the past three months, how have your bank's credit standards<sup>1</sup> as applied to the approval of loans<sup>2</sup> to households<sup>3</sup> changed? Please note that we are asking about the change in credit standards, rather than about their level.

(in percentages, unless otherwise stated)

2) See Glossary for Loans.

3) See Glossary for Households.

4) See Glossary for Consumer credit and other lending.

5) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage is defined as the difference between the sum of the percentages for "tightened considerably" and "tightened somewhat", and the sum of the percentages for "eased somewhat" and "eased considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

### Question 11

Over the past three months, how have the following factors affected your bank's credit standards as applied to the approval of loans to households for house purchase?

1) See Glossary for Cost of funds and balance sheet constraints.

2) See Glossary for Non-banks.

3) See Glossary for Perception of risk and risk tolerance.

4) See Glossary for Housing market prospects, including expected house price developments.

5) Risks related to non-performing loans may be reflected not only in the "borrower's creditworthiness", but also in the bank's "cost of funds and balance sheet constraints".

6) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage (NetP) is defined as the difference between the sum of banks responding "--" (contributed considerably to tightening) and "-" (contributed somewhat to tightening), and the sum of banks responding "+" (contributed somewhat to easing) and "++" (contributed considerably to easing). "°" means "contributed to basically unchanged credit standards". The diffusion index (DI) is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options.

## Question 12

Over the past three months, how have your bank's terms and conditions<sup>1</sup> for new loans to households for house purchase changed?

1) The factors refer to the same sub-factors as in question 11.

2) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage (NetP) is defined as the difference between the sum of banks responding "--" (contributed considerably to tightening) and "-" (contributed somewhat to tightening), and the sum of banks responding "+" (contributed somewhat to easing) and "++" (contributed considerably to easing). "°" means "contributed to keeping credit terms and conditions basically unchanged". The diffusion index (DI) is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options.

#### Question 14

Over the past three months, how have the following factors affected your bank's credit standards as applied to the approval of consumer credit and other lending to households?

(in percentages, unless otherwise stated)

1) The factors refer to the same sub-factors as in question 14.

2) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage (NetP) is defined as the difference between the sum of banks responding "--" (contributed considerably to tightening) and "-" (contributed somewhat to tightening), and the sum of banks responding "+" (contributed somewhat to easing) and "++" (contributed considerably to easing). "°" means "contributed to keeping credit terms and conditions basically unchanged". The diffusion index (DI) is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options.

### Question 17

Over the past three months (apart from normal seasonal fluctuations), has the share of household loan applications<sup>1</sup> that were completely rejected<sup>2</sup> by your bank increased, remained unchanged or decreased (loan volume, relative to the total volume of loan applications in that loan category)?

(in percentages, unless otherwise stated)

	Loans for house purchase		Consumer credit and other lending

1) See Glossary for Loan application.

2) See Glossary for Loan rejection.

3) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage is defined as the difference between the sum of banks responding "increased considerably" and "increased somewhat", and the sum of banks responding "decreased somewhat" and "decreased considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

### Question 18

Over the past three months (apart from normal seasonal fluctuations), how has the demand for loans<sup>1</sup> to households changed at your bank? Please refer to the financing need of households independent of whether this need will result in a loan or not.

1) Consumption expenditure financed through real-estate guaranteed loans

2) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage (NetP) is defined as the difference between the sum of banks responding "++" (contributed considerably to higher demand) and "+" (contributed somewhat to higher demand), and the sum of banks responding "-" (contributed somewhat to lower demand) and "--" (contributed considerably to lower demand). "°" means "contributed to keeping demand basically unchanged". The diffusion index (DI) is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options.

**Question 21**

Please indicate how you expect your bank's credit standards as applied to the approval of loans to households to change over the next three months. Please note that we are asking about the change in credit standards, rather than about their level.

(in percentages, unless otherwise stated)

1) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage is defined as the difference between the sum of the percentages for "tightened considerably" and "tightened somewhat", and the sum of the percentages for "eased somewhat" and "eased considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

**Question 22**

Please indicate how you expect demand for loans to households to change over the next three months at your bank (apart from normal seasonal fluctuations). Please refer to the financing need of households independent of whether this need will result in a loan or not.

Notes: The net percentage is defined as the difference between the sum of the percentages for "increase considerably" and "increase somewhat", and the sum of the percentages for "decrease somewhat" and "decrease considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

1) Please also take into account any effect of state guarantees vis-à-vis debt securities and recapitalisation support.

2) "NA" (not applicable) includes banks for which the source of funding is not relevant.

3) Usually involves on-balance sheet funding.

4) Usually involves the sale of loans from banks' balance sheets, i.e. off-balance sheet funding

5) Usually involves the use of credit derivatives, with the loans remaining on banks' balance sheets.

Notes: The net percentage (NetP) is defined as the difference between the sum of the percentages of banks responding "--" (deteriorated considerably/will deteriorate considerably) and "-" (deteriorated somewhat/will deteriorate somewhat), and the sum of banks responding "+" (eased somewhat/will ease somewhat) and "++" (eased considerably/will ease considerably). "°" means "remained unchanged/will remain unchanged". The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. Std. dev. denotes standard deviation. Figures may not exactly add up due to rounding.

## Question 120

In connection with the new regulatory or supervisory actions <sup>(\*)</sup>, has your bank: increased/decreased total assets; increased/decreased risk-weighted assets; increased/decreased its capital position; experienced an easing/tightening of its funding conditions over the past twelve months; and/or does it intend to do so over the next twelve months?

(\*) Please consider regulatory or supervisory actions that have recently been approved/implemented or that are expected to be approved/implemented in the near future.

1) Total assets are the bank's total unweighted assets. Risk-weighted assets are the product of total assets and risk weights. Liquid assets should be defined as freely transferable assets that can be converted quickly into cash in private markets within a short time frame and without significant loss in value, in line with the European Commission Delegated Act of 10.10.2014 to supplement Regulation (EU) 575/2013 with regard to liquidity coverage requirement for Credit Institutions (C (2014) 7232 final).

2) "Capital issuance" refers to the change in the capital stock owing to capital issuance. If no capital has been issued in the period under review, the capital stock "remained basically unchanged" on account of "Capital issuance". Capital issuance includes the issuance of shares and hybrid instruments, as well as capital injections by, inter alia, national or supra-national public authorities.

3) Please select "N/A" (not applicable) only if you do not have any business in or exposure to this category.

Notes: The net percentage (NetP) is defined as the difference between the sum of the percentages of banks responding "--" (decreased/will decrease considerably or experienced/will experience a considerable tightening of funding conditions) and "-" (decreased/will decrease somewhat or experienced/will experience a moderate tightening of funding conditions), and the sum of the percentages of banks responding "+" (increased/will increase somewhat or experienced/will experience a moderate easing of funding conditions) and "++" (increased/will increase considerably or experienced/will experience a considerable easing of funding conditions). "o" means remained unchanged/will remain unchanged. The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. Figures may not exactly add up due to rounding. The number of banks responding (No of banks) refers to all participating banks which have business in or exposure to the respective lending category. Std. dev. denotes standard deviation.

### Question 121

Have any adjustments been made, or will any be made, to your bank's credit standards/margins for loans over the past/next twelve months, owing to the new regulatory or supervisory actions? (\*)

1) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

(\*) Please consider regulatory or supervisory actions that have recently been approved/implemented or that are expected to be approved/implemented in the near future. Notes: The net percentage (NetP) is defined as the difference between the sum of the percentages of banks responding "-" (credit standards / margins have been tightened/will be tightened considerably) and "+" (credit standards / margins have been eased/will be eased somewhat), and the sum of the percentages of banks responding "+" (credit standards / margins have been eased/will be eased somewhat) and "++" (credit standards / margins have been eased/will be eased considerably). "o" means the requirements have basically not had/will not have any impact on credit standards / margins. The mean and standard deviation are calculated by attributing the values 1 to 5 to the first possible answer and consequently for the others.

### Question 135

Please indicate the impact of your bank's non-performing loan (NPL) ratio<sup>1</sup> on your lending policy. In addition, please indicate the contribution of each factor through which the NPL ratio has affected or will affect your bank's lending policy.

Your bank's risk tolerance	0	4	92	1	0	3	3	3.0	0.23	152

1) The NPL ratio is defined as the stock of gross non-performing loans on your bank's balance sheet as a percentage of the gross carrying amount of loans. Changes in credit standards and/or terms and conditions can be caused by changes in the NPL ratio or by changes in regulation or in the bank's assessment of the level of the NPL ratio, even if the NPL ratio has remained unchanged.

2) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category (as regards credit standards), have not granted any new loans in the respective lending category during the period specified (as regards credit terms and conditions), or do not have any non-performing loans.

3) This may include costs due to the need for additional provisions and/or write-offs exceeding the previous stock of provisions.

4) This may include expectations of or uncertainty about future supervisory or regulatory requirements.

5) Banks' perception of risk regarding the general economic situation and outlook, borrowers' creditworthiness and of the risk related to collateral demanded.

Notes: "--" = has contributed considerably/will contribute considerably to tightening; "-" = has contributed somewhat/will contribute somewhat to tightening; "°" = has not had/will not have an impact; "+" = has contributed somewhat/will contribute somewhat to easing; "++" = has contributed considerably/will contribute considerably to easing. The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. Figures may not exactly add up due to rounding. The number of banks responding (No of banks) refers to all participating banks which have business in or exposure to the respective lending category. Std. dev. denotes standard deviation.

### Question 139

1) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

2) The sectors of economic activities are based on the statistical classification of economic activities in the European Community (NACE Rev. 2): Manufacturing = C, Construction (excluding real estate) = F - F.41, Wholesale and retail trade = G, Services (excluding financial services and real estate) = M, N, H, I, J, Real estate = L + F.41. According to Eurostat, NACE relates to the characteristics of the activity itself. In this respect, please allocate the loans to the activity of the ultimate recipient of the funds. Units engaged in the same kind of economic activity are classified in the same category of NACE, irrespective of whether they are (part of) incorporated enterprises, individual proprietors or government, whether or not the parent enterprise is a foreign entity and whether or not the unit consists of more than one establishment. Source: Eurostat, NACE Rev. 2, Statistical classification of economic activities in the European Community, 2008.

3) This includes real estate construction (F.41) and real estate services (L). Commercial real estate is property used for business purposes (e.g. office, retail, industrial, multifamily (of five units or more), hotel, and special purpose buildings), while residential real estate is property used for living purposes, typically single family or individuals homes and one to four unit rental residences.

Notes: The net percentage (NetP) is defined as the difference between the sum of the percentages of banks responding "--" (tightened or decreased considerably) and "-" (tightened or decreased somewhat), and the sum of the percentages of banks responding "+" (eased or increased somewhat) and "++" (eased or increased considerably). "°" means "remained basically unchanged". The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. Std. dev. denotes standard deviation. The number of banks responding (No of banks) refers to all participating banks which have business in or exposure to the respective lending category.

### Question 140

How have your bank's credit standards, terms and conditions and the demand for loans at your bank - with COVID-19 related government loan guarantees and without government loan guarantees - changed? How have the following factors affected the demand for loans at your bank? Please describe the changes over the past six months.

(in percentages, unless otherwise stated)

1) Please select "N/A" (not applicable) only if you do not have any business in or exposure to the respective category or if no COVID-19 government guarantee exists for this loan category.

2) Including all loans which have been originated by the bank, i.e. also including loans which have been removed from the bank's balance sheet following loan origination.

3) "The self-employed" includes sole proprietorships and partnerships.

4) This may also include the limited availability or unavailability of other financing sources.

Notes: The net percentage (NetP) is defined as the difference between the sum of the percentages of banks responding "--" (tightened/decreased considerably or will tighten/decrease considerably; contributed considerably or will contribute considerably to a decrease) and "-" (tightened/decreased somewhat or will tighten/decrease somewhat; contributed somewhat or will contribute somewhat to a decrease), and the sum of the percentages of banks responding "+" (eased/increased somewhat or will ease/increase somewhat; contributed somewhat or will contribute somewhat to an increase) and "++" (eased/increased considerably or will ease/increase considerably; contributed considerably or will contribute considerably to an increase). "o" means "remained basically unchanged or has not had/will not have an impact". The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. Figures may not exactly add up due to rounding. The number of banks responding (No of banks) refers to all participating banks which have business in or exposure to the respective lending category. Std. dev. denotes standard deviation.
